

## **The world's largest clean vehicle exhibition at Stockholm International Fairs, November 7-9**

Sweden is the top nation in Europe when it comes to putting clean vehicles on the streets. In Sweden 16% of the buses, 13% of municipal vehicles, 8% of taxis, 7% of corporate cars and 1% of private cars are designed for renewable fuels.

Clean Vehicles and Fuels is in Stockholm, on November 7-9. The exhibition is the largest of its kind, where visitors can see the latest and most interesting investments in the environment from car manufactures such as Volvo, Saab, Daimler-Chrysler, Fiat, VW, and Ford. There is more interest from the car industry than ever before, and the exhibition was fully booked long ago.

Clean Vehicle and Fuels has a strong international perspective. There are a large number of seminars with international lecturers of the highest standing, such as Michael Wang from the Department of Energy, USA or Chris Flavin from Worldwatch Institute, who both present their view of how the Third World can create growth and make money from the commitment of the West to the environment.

- ***We have an impressive programme to offer our visitors. The exhibition is not only the largest in the world, but probably also the best in terms of quality. The unique feature of Clean Vehicle and Fuels is that competing brands of vehicles and fuel manufacturers will be holding seminars and debates together during these three days.***

***We call this cooperation "the Swedish model", and perhaps we can serve as an example for other countries, says Eva Sunnerstedt, from the Environmental Administration in Stockholm and spokeswoman for the exhibition.***

Visit our webpage to find out more about the programme: [www.cleanvehicles.net](http://www.cleanvehicles.net) Don't miss the journalist breakfast and VIP presentation on November 7 at 9.00, Stockholm International Fairs.
